

Find what matters with Uwazi

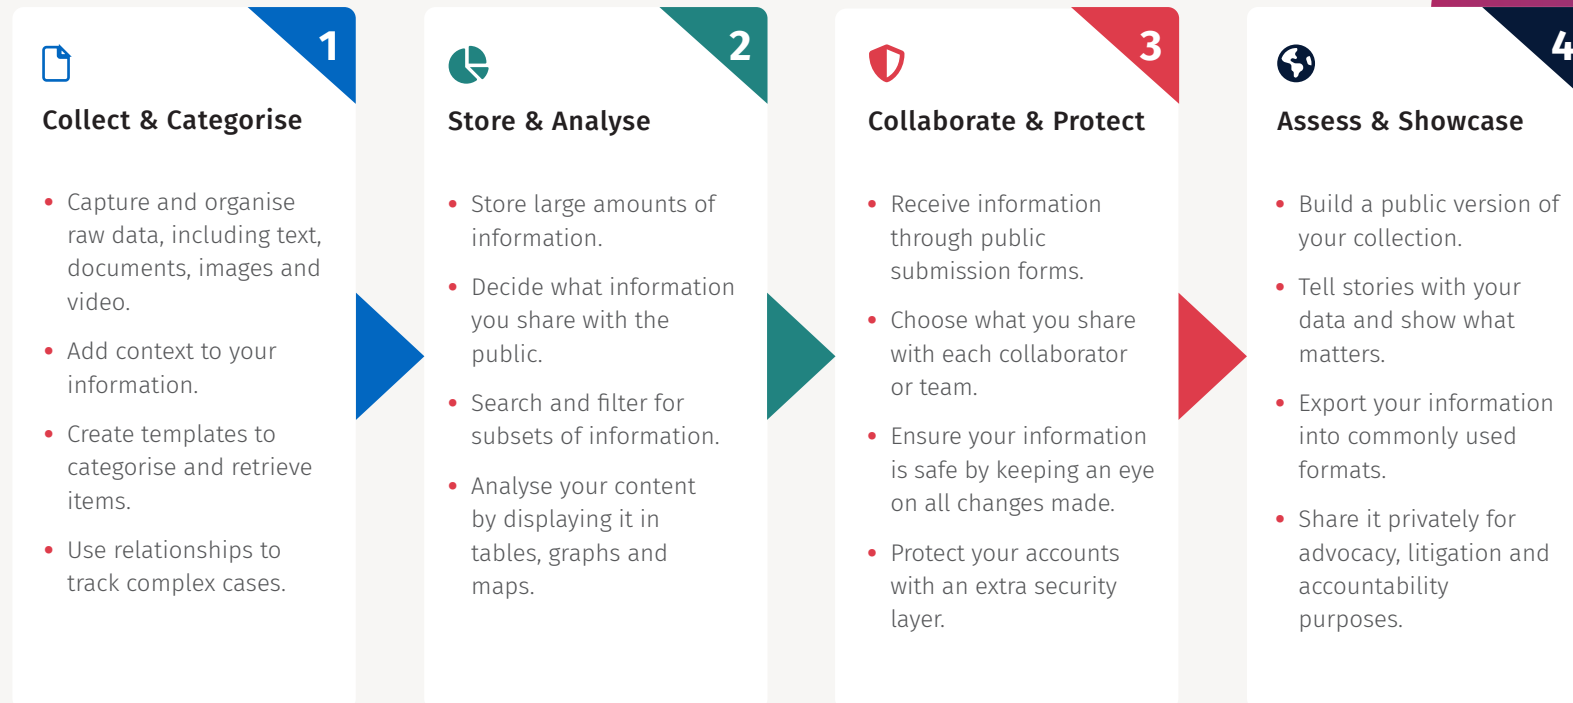

An open-source information management solution for the human rights community

Human rights groups are often confronted with enormous amounts of data and information, accumulating years' or even decades' worth of facts, observations, testimonies, research and materials that support the case for change.

To address this challenge, the open-source human rights documentation tool Uwazi was launched in 2017. Uwazi, which means 'openness' in Swahili, is a flexible web-based database application designed for human rights defenders to manage their collections of information, including documents, evidence, cases and complaints. More recently, Uwazi started to leverage machine learning to make human rights information even more accessible.

What can you do with Uwazi?

 **PROJECT SPOTLIGHT**

Justice Watch Archive

“We believe this will significantly help in delivering and verifying the information, identifying the victims closely and showing their own narratives, and, thus, shedding more light on the perpetrators and the places where they have committed their crimes.”

– **Ahmed Mefreh**
Human rights lawyer and Executive Director of the Committee for Justice, who developed the Justice Watch Archive to document human rights violations in the context of the Egyptian justice system

COLLECTIONS

300+ Uwazi collections and growing!

At the moment, more than 150 human rights organisations across the globe are using Uwazi as a database tool – some for more than one collection. That brings the total to more than 300 public and private Uwazi databases.

What is Uwazi used for?

To date, Uwazi has been used by for the following purposes:

- Preserving evidence related to an ongoing situation
- Managing complaints or cases for strategic litigation
- Compiling libraries of law, jurisprudence, reports or academic works
- Investigating a trove of public-interest documents
- Building an archive that preserves collective memory
- Monitoring and recording progress around policy implementation
- Collecting and sharing open-access educational resources
- Showcasing digitised art pieces or museum objects
- Cataloguing a collection of campaign or advocacy materials

PROJECT SPOTLIGHT

Case management and monitoring of violations against migrants, refugees and asylum seekers

“Uwazi is helping us to improve case management, supervision and reporting, as we have detailed control based on the structure of our data collection and documentation tools. It also allows us to focus our documentation on the persons, which is an essential aspect of our psycho-legal accompaniment model. The management of the content, the use of filters, downloading, analysis and generation of indicators, contribute to strengthening our documentation model.”

– Mavi Cruz Reyes

Centro de Derechos Humanos Fray Matías de Córdoba (FrayMa), who works on issues affecting the human rights of migrants, refugees and asylum seekers in Central America
